Heat Suppression

Hushpak, in partnership
with James Walker

Heat Suppression

Safeguarding, people, machinery and the environment

Hushpak has reached a partnership that combines James Walker's Australian-made removable thermal and acoustic covers with Hushpak's proven mobile machinery noise attenuation already demonstrated on large haul-truck fleets in NSW.

We offer a thermo-Acoustic wrap solution for mobile equipment that reduces engine-bay heat (fire risk) and noise exposure at the source, enabling compliance with Australian mining noise standards and engine-exhaust risk controls.

We offer a thermo-Acoustic wrap solution for mobile equipment that reduces engine-bay heat (fire risk) and noise exposure at the source, enabling compliance with Australian mining noise standards and engine-exhaust risk controls.

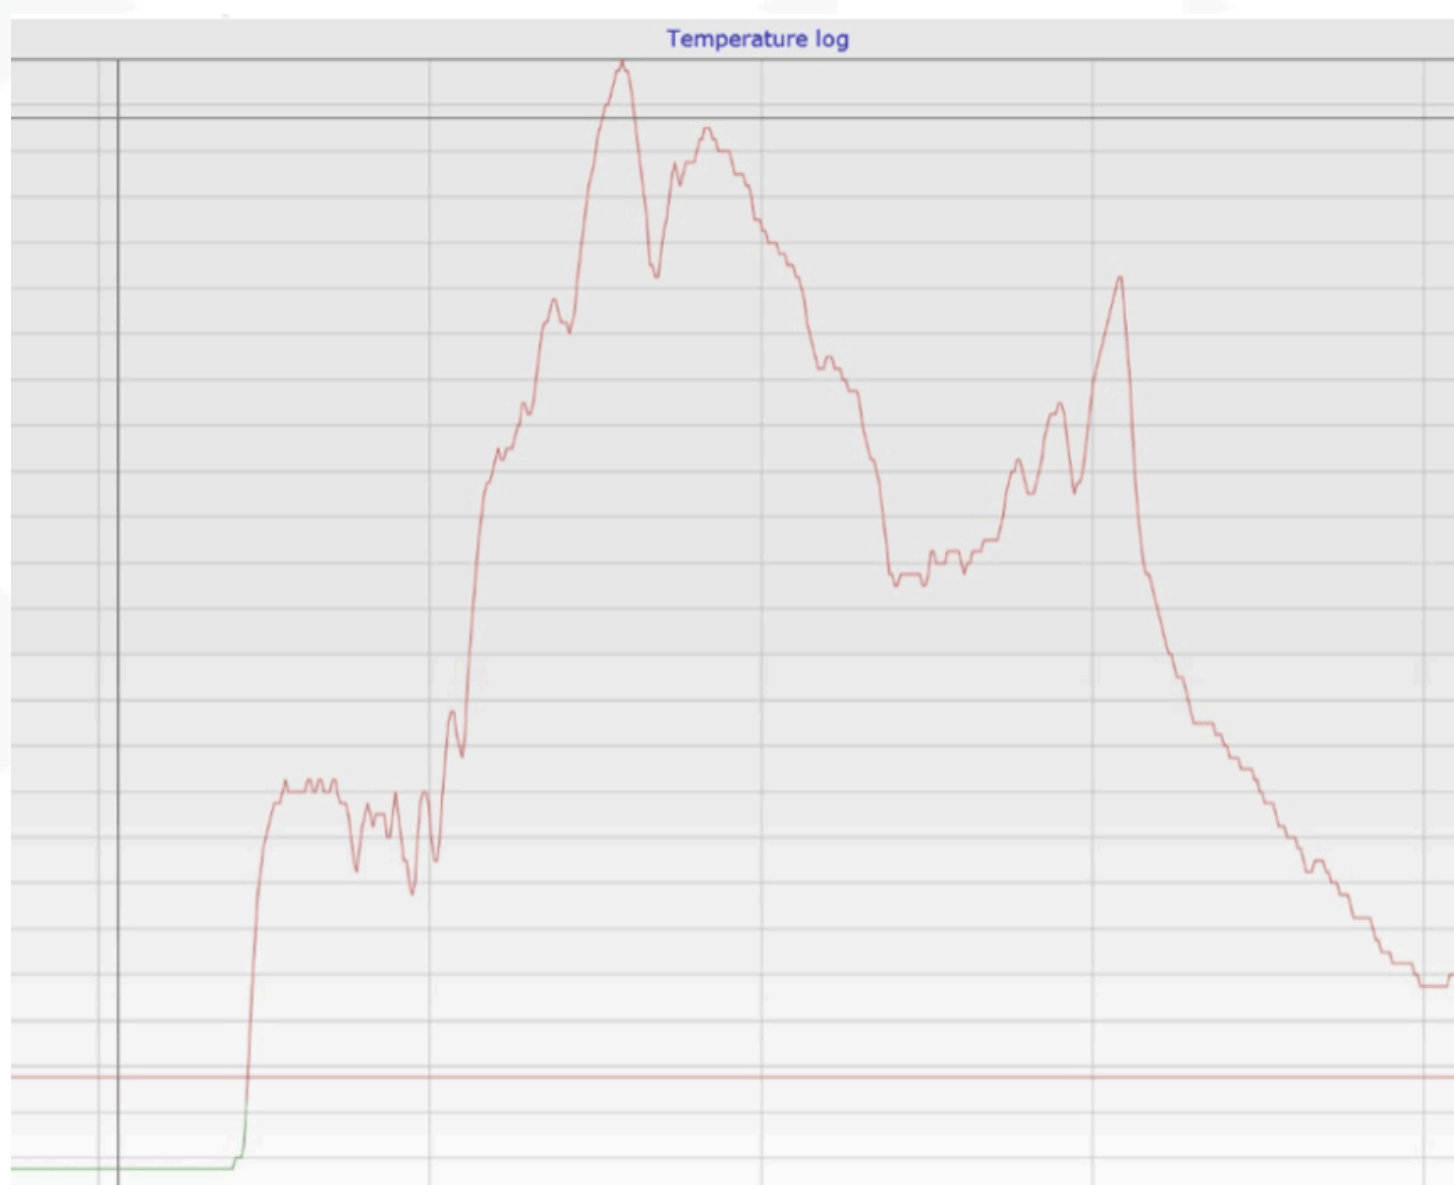

While competitors mostly offer thermal or acoustic wraps, Hushpak offers a bundled solution, offering both thermal and acoustic properties of the wraps. We offer:

- ▶ Thermal only
- ▶ Acoustic only
- ▶ Combined Thermo – acoustic

No other Australian solution actively combines both capabilities into one engineered system. Our solution aims to control heat, reduce noise, improve safety, enhance compliance, reduce downtime and fit any fleet.

Thermal testing - Hushpak also offers thermal testing for mobile machinery to help identify problems before they lead to equipment failure. Our capabilities include:

- ▶ Temperature range between 15-140 degrees C.
- ▶ Logging up to 2 weeks
