3D Models to life with  
Hushpak 3D

# 3D Printing

## Safeguarding, people, machinery and the environment

**Hushpak** has expanded its capabilities to deliver rapid, high-precision, small-to medium-scale 3D printing production for industrial, commercial, and custom applications.

Our printing division offers:

- ▶ Multi-material capability
- ▶ High speed and high resolution FDM printing
- ▶ Cost-effective solutions

We offer a range of engineering-grade plastics (PLA, PETG, ABS, ASA, Nylon, TPU, Carbon-filled materials), build volume: approx. 256 mm x 256 mm and layer resolution: down to 0.1 mm.

Our 3D printing division enables fast turnaround, cost effective small-batch production, and design flexibility that traditional manufacturing cannot match. Whether you require prototype development, replacement parts, or customised solutions, Hushpak's professional manufacturing approach ensures quality, reliability, and precision every time.

Hushpak can handle the whole process from design through to assembly, or print your existing 3D models.

Our pipeline looks like:

1. Design of 3D model
2. Printing using our range of materials
3. Sanding, painting, priming and finishing
4. Assembly of parts
5. Packaging for delivery
