portable acoustic barriers

MegaQuiet®

Acoustic Barrier

ABOUT MegaQuiet® Hushpak has a long history in providing Sound Suppression products for mobile and fixed plant and equipment. In response to customer requests, Hushpak is proud to release a new range of Portable Acoustic Barriers ideal for temporary fencing barriers and surrounds for workshop and construction site applications.

Barriers are modular and available in 4 different forms.

MEGAQUIET Core, Duo, Lite and Max all offer superior sound suppression qualities for different applications and all are fire retardant, weather resistant and hard wearing. Suitable for commercial and industrial installations.

Hushpak combine the latest technology Australian made sound suppression materials with a tough PVC Coated polyester outer casing to produce flexible and light weight solutions that are easily installed and relocatable. Outer casing can be screen printed to include logos, safety messages and other information. The modular panels make it easy to fix to temporary or permanent fencing, scaffolding or purpose built frames as site canopies and barriers.

PRODUCT FEATURES:

- ▶ Non-combustible facing
- ▶ Australian Made
- ▶ Proven noise reduction
- ▶ High flexibility
- ▶ Easy to install
- ▶ Splash resistant

Megaquiet can be applied to portable work shelters and temporary work areas.

MEGAQUIET LITE:

MEGAQUIET Lite has a STC 17 and is our most cost effective product within the range. MegaQuiet Lite consists of fabric engineered for demanding industrial and commercial environments.

With a Panama weave base, MegaQuiet Lite offers exceptional tear and abrasion resistance, UV stability, and fire-retardant protection — enabling reliable performance both indoors and outdoors. Standard available sizes 2.4 X 2.4 meters & 2.4 X 1.2 meters, with a nominal weight of 1450 gsm and approx. 3 mm thickness, it delivers a lightweight low-cost solution that is easily installed.

STC 17 Noise Barrier

MEGAQUIET CORE:

MEGAQUIET Core lives up to its name and provides STC 30 performance as a reflective noise barrier. Ideal for use as a sound barrier in areas where blocking noise from getting in or out is needed. This cost-effective solution is easily transported, handled and installed.

MEGAQUIET DUO:

MEGAQUIET Duo has an absorptive layer both sides of the reflective barrier you benefit by not only blocking the noise with an impressive STC 28 but reducing the noise in the general area with an incredible NRC of 0.85.

Ideal for use in noisy work environments, inside buildings or structures and areas where simply diverting the sound is not enough. The Bi-directional sound absorbing and blocking technology make this product great for separating work-bays.

MEGAQUIET MAX:

MEGAQUIET Max takes performance to the next level and impressive STC30 barrier is maintained but with the added benefit of a sound absorption layer on one side providing an NRC of 1.00.

This makes this series ideal for use in areas where you require noise suppression inside the workspace or more densely populated areas where not only is blocking noise required but also reducing the effects of reflected sound impacting other areas. Ideal in fencing or temporary work shelter applications.
